

Solutions Overview

PRONTO-Xi's fully integrated solution delivers Financials, Supply Chain, Project Costing Management, e-Business, Retail, Service Management, Relationship Management, Manufacturing, Facility Management and Business Intelligence.

Pronto Software is an Australian company - with Australian R&D - who develop, sell and support PRONTO-Xi, a powerful Enterprise Resource Planning (ERP) system ideally suited to deliver immediate and lasting value to mid-market companies. PRONTO-Xi is comprehensive, with broad business application and the deep functionality that only decades of knowledge can deliver.

With PRONTO-Xi you get to choose:

- Your operating system - Unix, Linux or Windows Server.
- Your database - IBM C-ISAM, Oracle or Microsoft SQL Server.
- Your business functionality - buy the modules you need, as you need them.

PRONTO-Xi is fully integrated and PRONTO-Xi modules are written and maintained by us to ensure that where appropriate, they connect with other modules. The benefit to you is a seamless flow of information within your business to save you time and money.

PRONTO-Xi Financials

Consolidates the diverse activities of your organisation into a single financial control centre. It provides the tools for managing your cash flow and gross margins while offering a high level view of your Key Performance Indicators (KPI). This module offers immediate visibility of the outcome of your business operations that contributes to your bottom line.

- PRONTO-Xi Financials incorporates:
 - General Ledger;
 - Accounts Receivable;
 - Accounts Payable;
 - Assets Management;
 - Financial Report Writer.

PRONTO-Xi Distribution

Distribution brings a new level of efficiency to your supply chain processes through superior integration of product, information and finance flows. Business agility is dramatically increased with rapid sales order entry and outstanding warehouse throughput.

Distribution streamlines physical processes such as the picking and packing of goods as well as the movement of goods internally (warehousing) and externally (shipping, transportation). It also automates your extended supply chain through the transmission and receipt of electronic messages.

Distribution manages all stock related operations across the extended enterprise. It enables dramatic reductions in receiving and delivery times and, with its open architecture and powerful collaborative applications, manages the information flow both upstream and downstream through your entire supply chain.

PRONTO-Xi Service Management

Service Management handles the ongoing servicing of your customers' equipment. It enhances the quality of your customer service through better call management, faster call resolution and simplified contract management.

Service Management incorporates a flexible framework which maps the diverse requirements of your customers to the system. Whether you run a fleet of vans carrying parts, a team of on-site engineers, or a pool of technicians with various skill sets, you have all the functionality to service your customers satisfactorily while increasing the profitability of your operation. Calls can be entered and prioritised by customers over the Internet and they can be kept informed of their call status at any time.

PRONTO-Xi Project Costing

Project Costing Management tracks your projects from the estimation and quotation stage all the way through to completion. Project Costing Management automates the processes of producing quotations, recording and controlling costs and tracking project performance.

Projects may be linked together in various ways to form a hierarchy, with reporting relationships between various groups of projects. Purchase orders, creditor invoices, issuing of stock, customer invoices and progress claims can all be linked to specific projects.

All transactions and project activities are automatically and instantly updated throughout the system, avoiding inaccuracies and double entries. Project Costing Management provides a true "cradle to grave" project costing tool tailored to your specific business needs.

PRONTO-Xi Maintenance Management

Maintenance Management is designed to simplify planning and maintenance procedures. It reduces operating costs with functionalities like preventative maintenance, downtime management and fault analysis. Maintenance Management is fully integrated with all other PRONTO-Xi applications.

PRONTO-Xi Rental

Rental is designed for organisations renting or leasing out equipment. It is the ideal solution for a range of industries including vehicle, industrial equipment, furniture or video hires. It manages all aspects of your rental contracts, from preparing the equipment, creating the contract, delivering the goods and invoicing contracted values. It also manages the return and servicing of rented equipment.

PRONTO-Xi Manufacturing

Shopfloor Manufacturing and Manufacturing Planning provide the planning, execution and monitoring systems to streamline all the processes involved in the transformation of raw materials and components into finished goods. It offers great flexibility, supporting a wide range of manufacturing industries, while still maintaining ease of use and straightforward implementation. PRONTO-Xi handles all commonly found modes of manufacturing from high-volume production environments to mass customisation.

Manufacturing processes vary greatly between different industries and frequently differ even within the same company. PRONTO-Xi handles your product being made to stock, made to order, assembled to order, or even engineered to order.

It offers a full range of tools, from traditional shop floor control, planning and work-order methods to production without work-orders, reducing the administrative burden significantly.

Manufacturing Planning provides additional tools for consistent and predictable business performance. These include:

- Advanced Forecasting;
- Master Production Scheduling (MPS);
- Material Requirements Planning (MRP);
- Distribution Requirements Planning (DRP);
- Capacity Requirements Planning & Scheduling (CRP);
- Just in Time (JIT);
- Production Planning (PP).

PRONTO-Xi Relationship Management

Relationship Management provides 360 degree customer and prospect visibility. Relationship Management at-a-glance account status reduces time spent drilling into customer details and keeps sales staff up-to-date.

The product helps you conduct relevant, well-timed marketing programs to enhance customer relationships as well as increase profits. Relationship Management campaigns encompass telesales scripts, and campaign effectiveness can be tracked, measured and graphed all within the application.

Integrating with Microsoft Outlook™, Relationship Management ensures your sales team stays on top of customer needs.

PRONTO-Xi Infrastructure

stands “**XI**” for “eXtensible Infrastructure”, a term which encapsulates the development philosophy behind the new generation of Pronto Software’s flagship Enterprise Management Solution.

Extensible – able to be flexibly extended and built upon. Enables the product to plug into a wide variety of non-PRONTO-Xi tools, products and services.

Infrastructure – the basic framework which underpins the PRONTO-Xi solution. All the non-application level components which comprise the overall fabric of the solution – the language and runtime; the operating platforms and environments; the security structures; the menu systems; the desktop integration frameworks; the tools and techniques for development and customisation; the network capability and the adoption of open standards.

The following diagram provides pictorial view as to the infrastructure and interoperability capabilities of PRONTO.
